

# Elab Fluor® 594-11-dUTP

Cat. No: E-CK-A122D Size:  $25 \mu L/250 \mu L$ 

Cat.	Products	Size (1nmol/µL)		Storage
E-CK-A122D	Elab Fluor® 594-11-dUTP	25 μL	$250~\mu\mathrm{L}$	-20 ℃, shading light

## **Storage**

Store in the dark at -20 °C for 12 months. Avoid repeated freezing and thawing. It is not recommended to vortex.

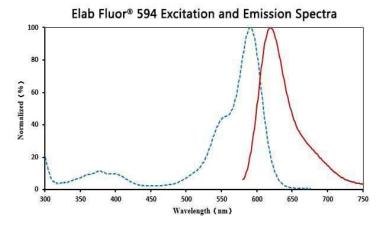

## **Introduction**

Elab Fluor<sup>®</sup> 594-11-dUTP is a modified triphosphate that can be linked to the 3 '-OH terminal of DNA by terminal transferase. This triphosphate is linked between fluorescein and the nitrogenous base by an 11-atom chain, which effectively prevents static quenching of fluorescence and improves the efficiency of nucleotide binding to the 3 '-OH terminal of DNA.

## **Detection Principle**

Chromosome DNA breakage is an important marker event in cell apoptosis. A series of DNA 3 '-OH terminus is produced by DNA double-strand breaks in apoptotic cells or whenever there is a gap in one strand. The fluorescein labeled dUTP can be linked to the 3'-OH terminus of the broken DNA under the action of Terminal Deoxynucleotidyl Transferase (TdT). Fluorescence of dUTP conjugate can be detected by flow cytometry or fluorescence microscope.

## **Detection**

Ex:590 nm; Em:617 nm

## **Cautions**

- 1. This kit is for reseach use only.
- 2. For your safety and health, please wear the lab coat and disposable gloves before the experiments.

#### For Research Use Only
