# Purified Anti-Human CD16 Antibody[CB16]

**Catalog No.** E-AB-F1005A **Reactivity** Human **Storage** Store at 2~8°C, Avoid freeze / thaw cycles **Applications** FCM

**Important Note:** Centrifuge before opening to ensure complete recovery of vial contents.

## **Antigen Information**

Alternate Names Low affinity immunoglobulin gamma Fc region receptor III-A,FCGR3A,CD16a antigen,Fc-

gamma RIII-alpha,Fc-gamma RIII,Fc-gamma RIIIa,FcRIIIa,FcRIIIa,FcR-10,IgG Fc receptor

III-2,CD16a

Uniprot ID P08637

Background CD16 is known as low affinity IgG receptor III (FcγRIII). It is expressed as two distinct forms

(CD16a and CD16b). CD16a ( $Fc\gamma RIIIA$ ) is a 50-65 kD polypeptide-anchored transmembrane protein. It is expressed on the surface of NK cells, activated monocytes, macrophages, and placental trophoblasts in humans. CD16b ( $Fc\gamma RIIIB$ ) is a 48 kD glycosylphosphatidylinositol (GPI)-anchored protein. Its extracellular domain is over 95% homologous to that of CD16a, and it is expressed specifically on neutrophils. CD16 binds aggregated IgG or IgG-antigen complex which functions in NK cell activation, phagocytosis, and antibody-dependent cell-mediated

cytotoxicity (ADCC).

### Recommended usage

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is  $\leq 2.0 \,\mu g$  per  $10^6$  cells in 100  $\mu L$  volume or 100  $\mu L$  of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.
