Antigen Information

Alternate Names B4, CVID3, B-lymphocyte antigen CD19, B-lymphocyte surface antigen B4, T-cell surface

antigen Leu-12

Uniprot ID P15391

Background CD19 is a 95 kD type I transmembrane glycoprotein also known as B4. It is a member of the

immunoglobulin superfamily expressed on B-cells (from pro-B to blastoid B cells, absent on plasma cells) and follicular dendritic cells. CD19 is involved in B cell development, activation, and differentiation. CD19 forms a complex with CD21 (CR2) and CD81 (TAPA-1), and

functions as a BCR co-receptor.

Recommended usage

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is $\leq 1 \mu g$ per 10^6 cells in $100 \mu L$ volume or $100 \mu L$ of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.
