# **Elabscience**®

# PE/Cyanine5.5 Anti-Mouse CD279/PD-1 Antibody[29F.1A12]

Catalog No.E-AB-F1131IStorageStore at 2~8°C, Avoid freeze / thaw cycles

ReactivityMouseApplicationsFCM

Important Note: Centrifuge before opening to ensure complete recovery of vial contents.

# **Antigen Information**

Alternate Names	PD-1, Programmed Death-1
Uniprot ID	Q02242
Background	CD279, also known as programmed death-1 (PD-1), is a 50-55 kD glycoprotein belonging to the
	CD28 family of the Ig superfamily. PD-1 is expressed on activated splenic T and B cells and
	thymocytes. It is induced on activated myeloid cells as well. PD-1 is involved in lymphocyte
	clonal selection and peripheral tolerance through binding its ligands, B7-H1 (PD-L1) and B7-DC
	(PD-L2). It has been reported that PD-1 and PD-L1 interactions are critical to positive selection
	and play a role in shaping the T cell repertoire. PD-L1 negative costimulation is essential for
	prolonged survival of intratesticular islet allografts.

#### **Product Details**

Form	Liquid
Size	50Tests/100Tests/100Tests×2
Clone No.	29F.1A12
Host	Rat
Isotype	Rat IgG2a, κ
Reactivity	Mouse
Application	FCM
Isotype Control	PE/Cyanine5.5 Rat IgG2a, κ Isotype Control[2A3] [Product E-AB-F098321]
Storage Buffer	Phosphate buffered solution, pH 7.2, containing 0.09% stabilizer and 1% protein protectant.
Shipping	Biological ice pack at 4 °C
Stability & Storage	Keep as concentrated solution.
	Store at 2~8°C and protected from prolonged exposure to light.Do not freeze.
	This product is guaranteed up to one year from purchase.

For Research Use Only

Thank you for your recent purchase. If you would like to learn more about antibodies, please visit www.elabscience.com. Focus on your research Service for life science

Applications:Activ- Activation; Block- Blocking; Separation- Cell Separation ; Cell Sep-Neg- Cell Separation by Negative Selection; FA-Functional Assay; Neut- Neutralization; Stim- Stimulation; FCM- Flow Cytometry; ICFCM: Intracellular Staining for Flow Cytometry; WB-Western Blotting; IHC- Immunohistochemistry; IF- Immunofluorescence; IP- Immunoprecipitation

# **Elabscience**®

# Fluorophore

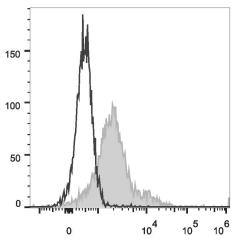

#### Conjugation: PE/Cyanine5.5

PE/Cyanine5.5 is designed to be excited by the Blue (488 nm), Green (532 nm) and yellow-green (561 nm) lasers and detected using an optical filter centered near 690 nm (e.g., a 690/50 nm bandpass filter).

### **Recommended usage**

Each lot of this antibody is quality control tested by flow cytometric analysis. The amount of the reagent is suggested to be used 5  $\mu$ L of antibody per test (million cells in 100  $\mu$ L staining volume or per 100  $\mu$ L of whole blood). Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use.

# **Product data**

Con-A stimulated C57BL/6 splenocytes (3 days) are stained with PE/Cyanine5.5 Anti-Mouse CD279/PD-1 Antibody (filled gray histogram). Unstained splenocytes (empty black histogram) are used as control.
