Elabscience®

Fluorophore

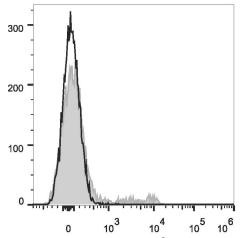

Conjugation: Elab Fluor[®] 647

Elab Fluor[®] 647 is designed to be excited by the Red laser (627-640 nm) and detected using an optical filter centered near 670 nm (e.g., a 660/20 nm bandpass filter).

Recommended usage

Each lot of this antibody is quality control tested by flow cytometric analysis. The amount of the reagent is suggested to be used 5 μ L of antibody per test (million cells in 100 μ L staining volume or per 100 μ L of whole blood). Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use.

Product data

C57BL/6 murine bone marrow cells are stained with Elab Fluor[®] 647 Anti-Mouse TER-119 Antibody (filled gray histogram). Unstained bone marrow cells (empty black histogram) are used as control.
