Antigen Information

| Alternate Names | Tumor necrosis factor receptor superfamily member 5,Cd40,B-cell surface antigen CD40,Bp50,CD40L receptor,CD40,Tnfrsf5 |
|-----------------|---|
| Uniprot ID | P27512 |
| Background | CD40 is a 48 kD type I transmembrane glycoprotein also known as Bp50. It is a member of the |
| | tumor necrosis factor receptor (TNFR) superfamily and is expressed on B cells, basal epithelial |
| | cells, macrophages, follicular dendritic cells, endothelial cells, and a subset of CD34+ |
| | hematopoietic progenitors. CD40 regulates B cell development/maturation, Ig isotype switching |
| | and, in combination with other signals such as IL-4, protects B cells from surface Ig-induced |
| | apoptosis and promotes proliferation. Interaction of CD40 with its ligand CD154 (gp39), which is |
| | expressed on activated T cells, is important in costimulation and immune regulation. |

Fluorophore

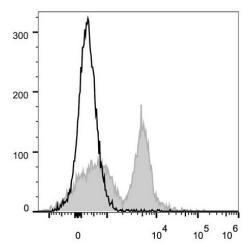

Conjugation: PE/Cyanine5

PE/Cyanine5 is designed to be excited by the Blue (488 nm), Green (532 nm) and yellow-green (561 nm) lasers and detected using an optical filter centered near 670 nm (e.g., a 690/50 nm bandpass filter).

Recommended usage

Each lot of this antibody is quality control tested by flow cytometric analysis. Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use. We suggest each investigator should titrate the reagent to obtain optimal results [The recommended concentration is $0.1-1 \ \mu g/10^6$ cells in $100 \ \mu L$ volume].

Product data

C57BL/6 murine splenocytes are stained with PE/Cyanine5 Anti-Mouse CD40 Antibody (filled gray histogram). Unstained splenocytes (empty black histogram) are used as control.
