Antigen Information

Alternate Names Tumor necrosis factor receptor superfamily member 5,Cd40,B-cell surface antigen

CD40,Bp50,CD40L receptor,CD40,Tnfrsf5

Uniprot ID P27512

Background CD40 is a 48 kD type I transmembrane glycoprotein also known as Bp50. It is a member of the

tumor necrosis factor receptor (TNFR) superfamily and is expressed on B cells, basal epithelial

cells, macrophages, follicular dendritic cells, endothelial cells, and a subset of CD34+

hematopoietic progenitors. CD40 regulates B cell development/maturation, Ig isotype switching and, in combination with other signals such as IL-4, protects B cells from surface Ig-induced apoptosis and promotes proliferation. Interaction of CD40 with its ligand CD154 (gp39), which is

expressed on activated T cells, is important in costimulation and immune regulation.

Fluorophore

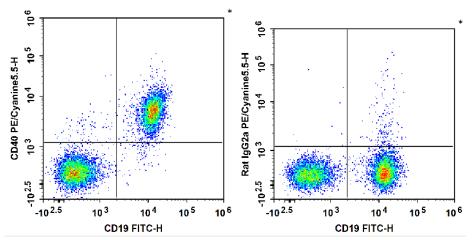

Conjugation: PE/Cyanine5.5

PE/Cyanine5.5 is designed to be excited by the Blue (488 nm), Green (532 nm) and yellow-green (561 nm) lasers and detected using an optical filter centered near 690 nm (e.g., a 690/50 nm bandpass filter).

Recommended usage

Each lot of this antibody is quality control tested by flow cytometric analysis. Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use. We suggest each investigator should titrate the reagent to obtain optimal results [The recommended concentration is 0.1-1 $\mu g/10^6$ cells in $100~\mu L$ volume].
