HLA-B Polyclonal Antibody

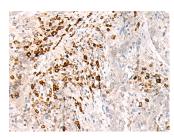

Catalog No.E-AB-17921ReactivityHStorageStore at -20°C. Avoid freeze / thaw cycles.HostRabbitApplicationsWB,IHC,ELISAIsotypeIgG

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Images

Western blot analysis of A549 cell lysate using HLA-B Polyclonal Antibody at dilution of 1:400

Immunohistochemistry of paraffinembedded Human cervical cancer tissue using HLA-B Polyclonal Antibody at dilution of 1:30(×200)

Immunogen Information

Immunogen Synthetic peptide of human HLA-B

Gene Accession NP005505 **Swissprot** P01889

Synonyms 1B07,AS,B-4901,B-7 alpha chain,HLAB,MHC HLA-

B transmembrane glycoprotein, SPDA1

Product Information

Calculated MW 40 kDa

Observed MW Refer to figures

Buffer PBS with 0.05% NaN3 and 40% Glycerol,pH7.4

Purify Antigen affinity purification

Dilution WB 1:500-1:2000, IHC 1:30-1:150, ELISA

1:5000-1:10000

Background

HLA-B belongs to the HLA class I heavy chain paralogues. This class I molecule is a heterodimer consisting of a heavy chain and a light chain (beta-2 microglobulin). The heavy chain is anchored in the membrane. Class I molecules play a central role in the immune system by presenting peptides derived from the endoplasmic reticulum lumen. They are expressed in nearly all cells. The heavy chain is approximately 45 kDa and its gene contains 8 exons. Exon 1 encodes the leader peptide, exon 2 and 3 encode the alpha1 and alpha2 domains, which both bind the peptide, exon 4 encodes the alpha3 domain, exon 5 encodes the transmembrane region and exons 6 and 7 encode the cytoplasmic tail. Polymorphisms within exon 2 and exon 3 are responsible for the peptide binding specificity of each class one molecule. Typing for these polymorphisms is routinely done for bone marrow and kidney transplantation. Hundreds of HLA-B alleles have been described.
