### Background

The KHSRP gene encodes a multifunctional RNA-binding protein implicated in a variety of cellular processes, including transcription, alternative pre-mRNA splicing, and mRNA localization. KHSRP (KH-Type Splicing Regulatory Protein) is a Protein Coding gene. Diseases associated with KHSRP include Ataxia, Cerebellar, Cayman Type. Among its related pathways are CDK-mediated phosphorylation and removal of Cdc6 and Gene Expression. GO annotations related to this gene include nucleic acid binding and RNA binding. An important paralog of this gene is FUBP1.
