# **PFKFB3 Polyclonal Antibody**

Catalog No.E-AB-53523ReactivityH,RStorageStore at -20°C. Avoid freeze / thaw cycles.HostRabbitApplicationsWB,ELISAIsotypeIgG

**Note:** Centrifuge before opening to ensure complete recovery of vial contents.

## **Images**

Western blot analysis of 293T cell lysates using PFKFB3 Polyclonal Antibody at dilution of 1:200

## **Immunogen Information**

**Immunogen** Synthetic peptide of human PFKFB3

**Gene Accession** NP004557 **Swissprot** Q16875

**Synonyms** Renal Carcinoma Antigen NY-REN-56,PFK/FBPase

3,IPFK2,PFK2

#### **Product Information**

Calculated MW 60 kDa

**Observed MW** Refer to figures

**Buffer** PBS with 0.05% NaN3 and 40% Glycerol,pH7.4

**Purify** Antigen affinity purification

**Dilution** WB 1:500-1:2000, ELISA 1:5000-1:10000

#### **Background**

The protein encoded by this gene belongs to a family of bifunctional proteins that are involved in both the synthesis and degradation of fructose-2,6-bisphosphate, a regulatory molecule that controls glycolysis in eukaryotes. The encoded protein has a 6-phosphofructo-2-kinase activity that catalyzes the synthesis of fructose-2,6-bisphosphate (F2,6BP), and a fructose-2,6-biphosphatase activity that catalyzes the degradation of F2,6BP. This protein is required for cell cycle progression and prevention of apoptosis. It functions as a regulator of cyclindependent kinase 1, linking glucose metabolism to cell proliferation and survival in tumor cells. Several alternatively spliced transcript variants encoding different isoforms have been found for this gene.
