Immunofluorescence analysis of HeLa cells using TNFRSF1A Polyclonal Antibody

Immunogen Information

Immunogen Recombinant fusion protein of human TNFRSF1A

(NP_001056.1).

 GeneID
 7132

 Swissprot
 P19438

Synonyms TNFRSF1A,CD120a,FPF,TBP1,TNF-R,TNF-R-

I,TNF-R55,TNFAR,TNFR1,TNFR55,TNFR60,p55

Product Information

Buffer PBS with 0.02% sodium azide, 50% glycerol, pH7.3.

Purify Affinity purification **Dilution** IF 1:50-1:200

Background

This gene encodes a member of the TNF receptor superfamily of proteins. The encoded receptor is found in membrane-bound and soluble forms that interact with membrane-bound and soluble forms, respectively, of its ligand, tumor necrosis factor alpha. Binding of membrane-bound tumor necrosis factor alpha to the membrane-bound receptor induces receptor trimerization and activation, which plays a role in cell survival, apoptosis, and inflammation. Proteolytic processing of the encoded receptor results in release of the soluble form of the receptor, which can interact with free tumor necrosis factor alpha to inhibit inflammation. Mutations in this gene underlie tumor necrosis factor receptor-associated periodic syndrome (TRAPS), characterized by fever, abdominal pain and other features. Mutations in this gene may also be associated with multiple sclerosis in human patients.
