# **DiMethyl-Histone H3-K9 Polyclonal Antibody**

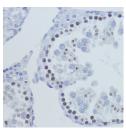

Catalog No.E-AB-67441ReactivityH,M,RStorageStore at -20°C. Avoid freeze / thaw cycles.HostRabbitApplicationsWB,IHC,IFIsotypeIgG

Note: Centrifuge before opening to ensure complete recovery of vial contents.

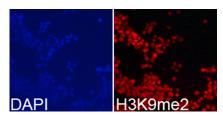

# **Images**

Western blot analysis of extracts of various cell lines using DiMethyl-Histone H3-K9 Polyclonal Antibody.

Immunohistochemistry of paraffinembedded Rat testis using DiMethyl-Histone H3-K9 Polyclonal Antibody at dilution of 1:200 (40x lens).

Immunofluorescence analysis of 293T cells using DiMethyl-Histone H3-K9 Polyclonal Antibody

# **Immunogen Information**

**Immunogen** A synthetic methylated peptide corresponding to

residues surrounding K9 of human histone H3

**GeneID** 8290 **Swissprot** Q16695

**Synonyms** H3.4,H3/g,H3FT,H3t,HIST3H3,Histone

H3,HIST1H3A

#### **Product Information**

Calculated MW 15kDa Observed MW 18kDa

**Buffer** PBS with 0.02% sodium azide, 50% glycerol, pH7.3.

**Purify** Affinity purification

**Dilution** WB 1:500-1:2000 IHC 1:50-1:200 IF 1:50-1:200

# **Background**

Histones are basic nuclear proteins that are responsible for the nucleosome structure of the chromosomal fiber in eukaryotes. Nucleosomes consist of approximately 146 bp of DNA wrapped around a histone octamer composed of pairs of each of the four core histones (H2A, H2B, H3, and H4). The chromatin fiber is further compacted through the interaction of a linker histone, H1, with the DNA between the nucleosomes to form higher order chromatin structures. This gene is intronless and encodes a replication-dependent histone that is a member of the histone H3 family. Transcripts from this gene lack polyA tails; instead, they contain a palindromic termination element. This gene is located separately from the other H3 genes that are in the histone gene cluster on chromosome 6p22-p21.3.
