# **RPS6 Polyclonal Antibody**

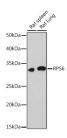

Catalog No. E-AB-67721 Reactivity H,M,R Store at -20°C. Avoid freeze / thaw cycles. **Storage** Host Rabbit **Applications Isotype IgG** 

**Note:** Centrifuge before opening to ensure complete recovery of vial contents.

### **Images**

Western blot analysis of extracts of various cell lines using RPS6 Polyclonal Antibody at dilution of 1:1000.

Western blot analysis of extracts of various cell lines using RPS6 Polyclonal Antibody at dilution of 1:1000.

### **Immunogen Information**

**Immunogen** A synthetic peptide of human RPS6 (NP 001001.2).

6194 GeneID **Swissprot** P62753

**Synonyms** RPS6,S6,RPS6

#### **Product Information**

Calculated MW 28kDa **Observed MW** 28kDa

**Buffer** PBS with 0.02% sodium azide, 50% glycerol, pH7.3.

**Purify** Affinity purification Dilution WB 1:500-1:1000

## **Background**

Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a large 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. This gene encodes a cytoplasmic ribosomal protein that is a component of the 40S subunit. The protein belongs to the S6E family of ribosomal proteins. It is the major substrate of protein kinases in the ribosome, with subsets of five C-terminal serine residues phosphorylated by different protein kinases. Phosphorylation is induced by a wide range of stimuli, including growth factors, tumor-promoting agents, and mitogens. Dephosphorylation occurs at growth arrest. The protein may contribute to the control of cell growth and proliferation through the selective translation of particular classes of mRNA. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this gene dispersed through the genome.
