

Anti-Zika virus(ZIKV)(strain Zika SPH2015) ZIKV-E/Envelope protein Monoclonal Antibody

E-AB-V1332

Application	ELISA	Host	Mouse
Storage	Store at -20°C. Avoid freeze / thaw cycles.	Clone No.	35

Important Note Centrifuge before opening to ensure complete recovery of vial contents.

Product Details

Immunogen	Recombinant ZIKV (strain Zika SPH2015) Envelope protein (Domain III, His Tag)
Isotype	IgG
Host	Mouse
Clone No.	35
Reactivity	Zika Virus
Dilution	ELISA 1:1000-1:10000
Storage Buffer	0.2 µm filtered solution in PBS
Stability & Storage	Ships on ice packs. Store at -20°C
Description	This antibody was produced from a hybridoma resulting from the fusion of a mouse myeloma with B cells obtained from a mouse immunized with purified Recombinant ZIKV (strain Zika SPH2015) Envelope protein (Domain III, His Tag). And the antibody was purified

Antigen Information

Alternate Names	E,Envelope Protein
Background	Envelope of Zika virus is responsible for receptor binding and membrane. Analysis of the envelope protein of Zika, from Brazilian Zika SPH215 (KU321639), indicates predicted B and T cell epitopes in peptides that are consistent to those reported for dengue, YFYF and Japanese encephalitis. The envelope Domain II B cell epitope, to which much dengue non-neutralizing cross reaction is attributed, is also conserved also in Zika virus, consistent with prior field observations of cross reactivity with dengue and YF. Domain III of the Zika envelope protein, likely the main specific neutralizing domain, is distinct from recent Brazilian dengue isolates and a recent Peruvian YF isolate (GQ379163), 76% of possible major histocompatibility complex class (MHC) I and MHC II binding peptides and potential B cell linear epitopes are unique to Zika virus.
