KLC1 Polyclonal Antibody

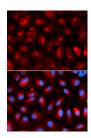

Catalog No. E-AB-61006 Reactivity H,M,R Store at -20°C. Avoid freeze / thaw cycles. **Storage** Host Rabbit **Applications** WB.IF **Isotype IgG**

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Images

Western blot analysis of extracts of various cell lines using KLC1 Polyclonal Antibody at dilution of 1:1000.

Immunofluorescence analysis of U2OS cells using KLC1 Polyclonal Antibody

Immunogen Information

Immunogen Recombinant fusion protein of human KLC1

(NP 005543.2).

GeneID 3831 **Swissprot** Q07866

Synonyms KLC1,KLC,KNS2,KNS2A

Product Information

Calculated MW 62-72kDa **Observed MW** 60-75kDa

Buffer PBS with 0.02% sodium azide, 50% glycerol, pH7.3.

Purify Affinity purification

Dilution WB 1:500-1:2000 IF 1:50-1:200

Background

Conventional kinesin is a tetrameric molecule composed of two heavy chains and two light chains, and transports various cargos along microtubules toward their plus ends. The heavy chains provide the motor activity, while the light chains bind to various cargos. This gene encodes a member of the kinesin light chain family. It associates with kinesin heavy chain through an N-terminal domain, and six tetratricopeptide repeat (TPR) motifs are thought to be involved in binding of cargos such as vesicles, mitochondria, and the Golgi complex. Thus, kinesin light chains function as adapter molecules and not motors per se. Although previously named 'kinesin 2', this gene is not a member of the kinesin-2 / kinesin heavy chain subfamily of kinesin motor proteins. Extensive alternative splicing produces isoforms with different C-termini that are proposed to bind to different cargos; however, the full-length nature and/or biological validity of most of these variants have not been determined.
